

## What you need

1. nsocks.net (optional if needed to do multiple orders)
2. gologin.com (browser)
3. vccs/vdcs (ask me which one u are using first)
4. When copying and pasting things, make sure to always do CTRL C then CTRL SHIFT V. Don't forget the shift. All this does is remove fonts as a safety measure.

Nsocks.net

Put in money

Make sure you put exclude used proxies, exclude blacklisted proxies, residential only proxies, clean proxy, newest is usually better (don't use proxies with 6 or more people using)

Where it says zip you add the customers restaurants zip code and then change the speed to 25+ miles radius

Choose one with speed of at least 100k (you can go under but just know itll be slow. the higher the faster)

Also make sure the proxy type is ISP/MOB

## Understanding Uber's Security Detection System

Uber uses multiple different data points to detect if someone is trying to place orders on an alternate account. They use all these data points to generate a "Risk Score" for each account and order. If the risk score is too high, you may be charged for cancellation, or even have your order denied at checkout. I have compiled all their data points through insider screenshots and testing. Since you are doing pickup, you are lucky since the risk score can be higher and still work compared to a delivery order where the threshold of the risk score/level has to be very low. With all these precautions we are able to keep the risk level as low as possible. Ill mention more later.

### Risk Score Evaluation:

- 80-100: Instant ban. You will receive an "Oops, error" and won't be able to load your cart, or anything else. Typically happens when you use a VPN.
- 50-80: Won't be able to apply promo codes. You will receive a "Promo code deemed invalid for this account" error. You may still be able to cancel though although it is around a 75% chance.
- 30-50: Will be able to apply promo codes while still canceling the order. But this score is likely a result of a skipped step, flagged address/region, or suspicious browser fingerprint.
- <30: Full access as a trusted normal user.

## One-Time Setup

- 1) Download GoLogin: <https://gologin.com/download>

2) Sign up for a VCC (Virtual CREDIT Card):

- a) My Recommendations: Capital One Eno, Revolut Credit (30 day old account), American Express, Citi
- b) Others that work are: Wise, Oxygen, Divvy, Lydia
- c) Avoid Privacy.com (they block Uber after 3 cards)
- d) Avoid prepaid debit cards (easily blocked)
- e) Ask for others

### Placing an Order

- 1) On your phone, turn on Airplane Mode and wait ~30 seconds
- 2) Turn off Airplane Mode and turn on your mobile hotspot
- 3) On your computer, connect to your phone's mobile hotspot.
- 4) OPTIONAL: If you suffer from slow mobile hotspot limits, you can use PairVPN to wire your phone to your PC and use your phone's data at full speed.
- 5) On your computer, Open GoLogin and press "New Profile"
- 6) Go to the Geolocation tab and change to "Block"
- 7) Press Create Profile and run the profile
- 8) To ensure that all the setup was done correctly, use the following resources to check that each new instance is completely unique
  - <https://abrahamjuliote.github.io/creepjs/> (Unique visits should be 1 on first visit)
  - <https://whatismyipaddress.com/> (Verify new IP each instance)
  - Sign up for an outlook or hotmail (i usually like to switch it up every time) account on the new GoLogin profile here: <https://signup.live.com/?lic=1>

<https://signup.live.com/?lic=1>

- a) These emails MUST be unique and different from each other. Do not simply just increment a number, since their email association is digit-normalized
- i) For example, ubertest145@outlook.com gets associated with ubertest601@outlook.com (so make sure the emails made are completely different from each other. jasonbenit.48@outlook wont get associated with bigd\_flawless@outlook.com)
- b) Catchalls or personal domains do not work. Neither do salted emails.

9. Go to [ubereats.com](https://ubereats.com)

10. Sign up with your email account, and verify

- a) Use a random different name each time as an extra safety measure (usually unnecessary though)
- 11. When prompted with a phone number, press skip
- 12. Press log in, and enter your new outlook/hotmail address
- 13. Fill up your cart and go to checkout
- 14. Try one of the following promo codes:
  - a) eats-v4pqq33mho
  - b) eats-9qg9h8wab5
  - c) FIRSTEATS30
  - d) Influenceats

\$20 o! 25 \$20 o! 25

\$30 o! \$30 \$15 o! 20

(US only) (US only)

(CA, maybe others) (Unknown)

e) Alternatively, make your own referrals on a different profile, and use those (best option)

15. Enter in your VCC info. If you are using Revolut, make sure you are creating a new "Virtual Credit Card", and not a debit card.

16. Press Place Order. You may be asked to verify your card which is fine

Placing an order using the proxy

1. Enter zip code of restaurant to get a proxy for that location (NSOCKS) or you can use your hotspot.

2. Once purchased a proxy make a new profile with gologin and enter it as a SOX 5 proxy don't change anything else.

3. Go on [ubereats.com](https://www.ubereats.com) and sign up with either an email with an account created from

4. once it asks for email google random tempmail websites and use a different one each time good tempmail rn is

<https://sms-activate.org/en/buy>, click on temporary mail, type in [uber.com](https://www.uber.com) then click email services and choose "hotmail", enter email on gologin

5. verify the uber account via the tempmail site

6. add items to checkout normally,

7. at checkout use the \$20 code already applied on account or use or LA30 for \$30 off bigger orders

8. place order, using vcc, now either 1 or 2 things will happen

1. it will ask you to verify card just place until it actually sends you verification amounts  
or

2. it will place without asking you for anything

Possible errors that could happen are "payment method error"

OR

"oops something went wrong"

for both instances RESTART

Now heres where the pickup method comes in.

When the customer gets at the parking lot, and the order says its ready or probably ready, wait at least 5 minutes after and click the help icon in the top right.

Then choose, Ongoing Order.

Then choose Help With a Pickup Order

Click Chat With Us

Say something around the lines of the place not being open (ex: The restaurant is closed)

It will then automatically assign you a support team member.

A lot of American support staff waste time so if you see an american name, just end the chat, and restart (Not really necessary but they take so long bruh). Make sure every representative for every order you get is different if you are doing multiple orders with same name.

Once you are speaking with a member, you don't really have to say anything. You can just wait til they say: checking through our internal articles to see what we can do for you. Although it sometimes helps to be texting back while being nice and sounding innocent just so they stay on your good side.

Then they will offer a full refund and cancellation of the order.

Comply and say yes. Once you get the notification that says that your order was canceled, check to make sure under orders it shows that order being at \$0.00. Once you see that, you are all set. (Btw you can then check your bank balance and you will see that you got the refund instantly since it's a cancellation and not a processed refund.)

Immediately get the food from the place asap.

Works for bigger chain restaurants mainly just because they're systems tend to not notice cancellation. Smaller chain restaurants have a higher chance of noticing. This is why I dont do small chain places anymore since I found out it actually affects them. But if you are doing for small chain place, its on you (i like staying the most ethical possible), and if they do notice though, just act confused. Just so they dont suspect you of anything (they usually never do since they think its just an error on ubereats end). Sometimes if they ask to just pay there, I like to just say I was trying to use a discount on ubereats along with my ubercash and that youll contact them about it. Just leave. At least you know that place doesnt work for the future. Youll just have to do a different place. (chipotle, mcdonalds, wendys, etc are always the easiest to do multiple times since they are big chain)

Coming soon: Method for smaller chain restaurants without them being affected is still in the works. If that method is found there will be an extra/separate charge for that method since it deems as a separate method. Price will be dependent on how easy it is and the type of benefits it comes with.
